

[AAAAI Foundation and Robert F. Lemanske, Jr., MD FAAAAI Lectureship \(3rd year\)](#)

3521 Managing Asthma in Older Adults

Sunday, February 26, 2023

Convention Center, Ballroom Level, Hemisfair C1, 12:30 pm – 1:45 pm

Lecturer: Andrea Apter, MD MA MSc FAAAAI

Community Health Worker Intervention in Older Adults with Asthma

AAAAI Foundation and Robert F. Lemanske, Jr., MD FAAAAI Lectureship will be presented by Andrea Apter, MD MA MSc FAAAAI on Sunday, February 26th during session 3521 Managing Asthma in Older Adults in Convention Center, Ballroom Level, Hemisfair C1, 12:30 pm – 1:45 pm (presentation at 12:35 pm)

Robert F. Lemanske, Jr., MD FAAAAI

The AAAAI Foundation is pleased to honor the dedicated physician/scientist and teacher, Dr. Robert F. Lemanske, Jr., with the creation of the Robert F. Lemanske, Jr. MD, FAAAAI Lectureship.

Dr. Lemanske is a committed leader within the specialty, proven from his involvement with the American Academy of Allergy, Asthma & Immunology (AAAAI) where he served as President from 2015 to 2016, Chair of the Dermatology Interest Section, Director and Chair of the American Board of Allergy and Immunology and is currently serving on the Grant Review Committee. He also helped create SAMPRO™, a School-based Asthma Management Program, during his presidential year with the AAAAI.

He currently serves as Professor Emeritus of Pediatrics and Medicine at the University of Wisconsin School of Medicine and Public Health (UWSMPH).

Dr. Lemanske's career began at the University of Wisconsin School of Medicine and Public Health, where he graduated in 1975. He went on to complete his pediatric residency training at the University of Wisconsin Hospitals in 1978. His allergy/immunology training was performed at the University of Wisconsin from 1978 to 1980 and the National Institute of Allergy and Infectious Disease from 1980 to 1982.

His research has been published in the Journal of Immunology, Journal of Allergy and Clinical Immunology, New England Journal of Medicine, Journal of the American Medical Association, Pediatric Research, Journal of Pediatrics, American Review of Respiratory and Critical Care Medicine, and Immunology. He was appointed to the National Heart Lung and Blood Institute's Advisory Council for decisions regarding extramural funding of basic and clinical research (2003-2007). He also has served on the expert panel for the development of guidelines for the treatment of childhood asthma in Canada and the United States (National Asthma Education and Prevention Program) (NAEPP) and is currently a member of the Scientific Committee of the National Asthma Education and Prevention Program.

Dr. Lemanske's research interests include the pathophysiology and treatment of asthma including mechanisms underlying pulmonary late phase reactions; virus-induced airway dysfunction; asthma inception in infants and young children; and contributions of both genetic (atopy) and environmental (viral and bacterial infections) factors on the origins of asthma and allergic disease in a birth cohort (COAST study – Childhood Origins of ASThma) program project grant for which he served as the principal investigator from 1998-2016. He has also been the principal investigator at the Madison site for three NHLBI-funded asthma clinical research networks that have contributed multiple findings to advance the diagnosis and treatment of asthma in both children and adults. Thus, his research has spanned the entire basic to translational to clinical research spectrum.

Andrea Apter, MD MA MSc FAAAAI

Andrea Apter is Professor Emeritus of Medicine at the University of Pennsylvania, board-certified in internal medicine and allergy-immunology. She holds a master degree in clinical epidemiology. As a clinician she focused on the care of patients with asthma and other immunologic diseases. Her research studies are informed by these experiences and focus on interventions addressing access to care, patient-clinician communication and achieving health equity. Her research, funded by the National Institutes of Health, concentrates on asthma as a model for the addressing social environment as determinants of health. She studies the patient-provider relationship, and the impact of the electronic health record on this relationship and currently how the COVID-19 pandemic has changed this relationship. She is devoted to mentoring physicians

and other students seeking a healthcare career devoted to improving health equity. She is an associate editor of the Journal of Clinical Immunology, has served on FDA Advisory Committees and the American Board of Allergy & Immunology, and currently serves on the Accreditation Committee of Graduate Medical Education for Allergy and Immunology.
