Position available: Physician

Job Description:

Capital Allergy & Respiratory Disease Center has been established for 40 years in the Greater Sacramento Metropolitan Area. The practice services adult, pediatric allergy and pediatric pulmonary patients. It is close to San Francisco, Napa, and the Lake Tahoe Region. Currently, there are three physicians and three nurse practitioners that see patients in three offices in the Greater Sacramento Metropolitan Area. The practice is an evidence-based practice that relies heavily on the published literature to guide patient care. There are also strong ties to a tertiary teaching hospital. The call structure is very light, and there is a paucity of hospital work. This very active practice has greater than 3000 patients on immunotherapy and over 400 patients on the five currently available biologics to treat asthma and allergic diseases. We evaluate drug and food allergy, providing diagnostic services (food and drug challenges), and will provide oral immunotherapy with the FDA approved product. This opportunity is excellent for an early or mid-career allergist to have a ready made referral base and ability to thrive in a congenial learning and practice environment.
