

The Robert A. Cooke Memorial Lectureship

Robert Anderson Cooke, MD was born in Holmdel, New Jersey in 1880, a descendant of three generations of physicians. He received his M.D. from Columbia University in 1904 and subsequently interned at Presbyterian Hospital. It was his own allergy to stable dusts, pollens and later horses that led him into this particular field. As an intern, he nearly died from an anaphylactic shock induced by an injection of diphtheria antitoxin.

In 1919, he founded the first allergy clinic which was then located at New York Hospital and was later moved to Roosevelt Hospital in June 1932. He was a founder of one of the two parent societies of the American Academy of Allergy in 1925 (also serving as the first President) and the New York Allergy Society in 1937. Additionally, he was the founding editor of the *Journal of Allergy* (now the JACI) in 1929. Throughout his medical life, he was primarily interested in the study and treatment of allergic diseases and is generally considered the father of allergy as a medical specialty. He was the author of approximately 200 scientific papers, most of which dealt with immunologic and allergic diseases. By the time he died in 1960, his influence on the teaching and practice of allergy was being furthered by the more than fifty residents and fellows he trained.

His work included not only the practical treatment of patients, but numerous fundamental contributions to the immunology of allergy. Among his outstanding contributions were studies of heredity in asthma and hay fever (1914), recognition of house dust as an allergen (1921), the immunologic relationship of naturally acquired and artificially induced sensitization (1929), demonstration of blocking antibody developed as a result of injection treatment (1935) and observations regarding skin sensitizing antibody.

The Alumni of the R. A. Cooke Institute of Allergy at St. Luke's Roosevelt Hospital Center are privileged to sponsor this lectureship which the AAAAI has established in perpetuity in the memory of an inspiring physician who has played a critical role in the development of the medical specialty of allergy and immunology.

2020 marks the 58th year of the Robert A. Cooke Memorial Lectureship. It will be presented during Symposium session: 2521 National Institute of Environmental Health Sciences (NIEHS): Exposure to Endocrine-Disrupting Chemicals and Asthma-Related Outcomes on March 14, 2020 at 12:30 pm - Convention Center, 400 Level, Terrace Ballroom III

Angelico Mendy, MD PhD

**Assistant Professor of Epidemiology in the Department of Environmental Health
at the University of Cincinnati College of Medicine**

Angelico Mendy, MD PhD is an Assistant Professor of Epidemiology in the Department of Environmental Health at the University of Cincinnati College of Medicine. Dr. Mendy earned his medical degree from the University of Dakar, Senegal and his PhD from the University of Iowa. He completed a fellowship at the National Institute of Environmental Health Sciences.

Dr. Mendy's research focuses on environmental exposures in relation to allergy and asthma as well as other respiratory diseases and their comorbidities. Exposures of interest include environmental endotoxin, ambient air pollution, and endocrine disrupting chemicals. Among his contributions are numerous articles, reviews, and

presentations at various national and international conferences on asthma and respiratory diseases.
