

The Robert A. Cooke Memorial Lectureship

3101 Atopic Dermatitis – New Insights from Bench to Bedside to Populations

Sunday, February 26, 2023

Convention Center, Lobby Level, Hall 2 8:15 am – 9:45 am

Lecturer: Lynda Schneider, MD FAAAAI

Making the GRADE: Practice Parameter Updates

The Robert A. Cooke Memorial Lectureship will be presented by Lynda Schneider, MD FAAAAI during plenary 3101 Atopic Dermatitis – New Insights from Bench to Bedside to Populations on Sunday, February 26th in Convention Center, Lobby Level, Hall 2 8:15 am – 9:45 am
(presentation at 9:15 am)

Robert A. Cooke, MD

Robert Anderson Cooke, MD was born in Holmdel, New Jersey in 1880, a descendant of three generations of physicians. He received his M.D. from Columbia University in 1904 and subsequently interned at Presbyterian Hospital. It was his own allergy to stable dusts, pollens and later horses that led him into this particular field. As an intern, he nearly died from an anaphylactic shock induced by an injection of diphtheria antitoxin.

In 1919, he founded the first allergy clinic which was then located at New York Hospital and was later moved to Roosevelt Hospital in June 1932. He was a founder of one of the two parent societies of the American Academy of Allergy in 1925 (also serving as the first President) and the New York Allergy Society in 1937. Additionally, he was the founding editor of the *Journal of Allergy* (now the JACI) in 1929. Throughout his medical life, he was primarily interested in the study and treatment of allergic diseases and is generally considered the father of allergy as a medical specialty. He was the author of approximately 200 scientific papers, most of which dealt with immunologic and allergic diseases. By the time he died in 1960, his influence on the teaching and practice of allergy was being furthered by the more than fifty residents and fellows he trained.

His work included not only the practical treatment of patients, but numerous fundamental contributions to the immunology of allergy. Among his outstanding contributions were studies of heredity in asthma and hay fever (1914), recognition of house dust as an allergen (1921), the immunologic relationship of naturally acquired and artificially induced sensitization (1929), demonstration of blocking antibody developed as a result of injection treatment (1935) and observations regarding skin sensitizing antibody.

The Alumni of the R. A. Cooke Institute of Allergy at St. Luke's Roosevelt Hospital Center are privileged to sponsor this lectureship which the AAAAI has established in perpetuity in the memory of an inspiring physician who has played a critical role in the development of the medical specialty of allergy and immunology

Lynda Schneider, MD FAAAAI

Lynda C. Schneider, MD. Dr. Schneider is Professor of Pediatrics at Harvard Medical School and the Sidman Family Chair in Immunology. She is Section Chief of Allergy in the Division of Immunology at Boston Children's Hospital. In 2000, she started the multidisciplinary atopic dermatitis program to improve the care of children with atopic dermatitis and other allergic co-morbidities. She continues as the Director of the Atopic Dermatitis Center at Boston Children's Hospital and heads the Division of Immunology clinical trials scientific review. She led the BCH Allergy/Immunology (A/I) fellowship program for 30 years. She was a principal investigator for the NIH sponsored Atopic Dermatitis Research Network as well as for many other allergy and immunology clinical trials. She has been recognized for many years as a Top Doctor by Boston Magazine. Her current research interests include new therapies/approaches for atopic dermatitis and for food allergy.
